Smart Resume Analyzer

Database ERD explained in simple words

What is this?

An ERD (Entity Relationship Diagram) is a map of the database. It shows what information the app stores (tables) and how those pieces are connected.

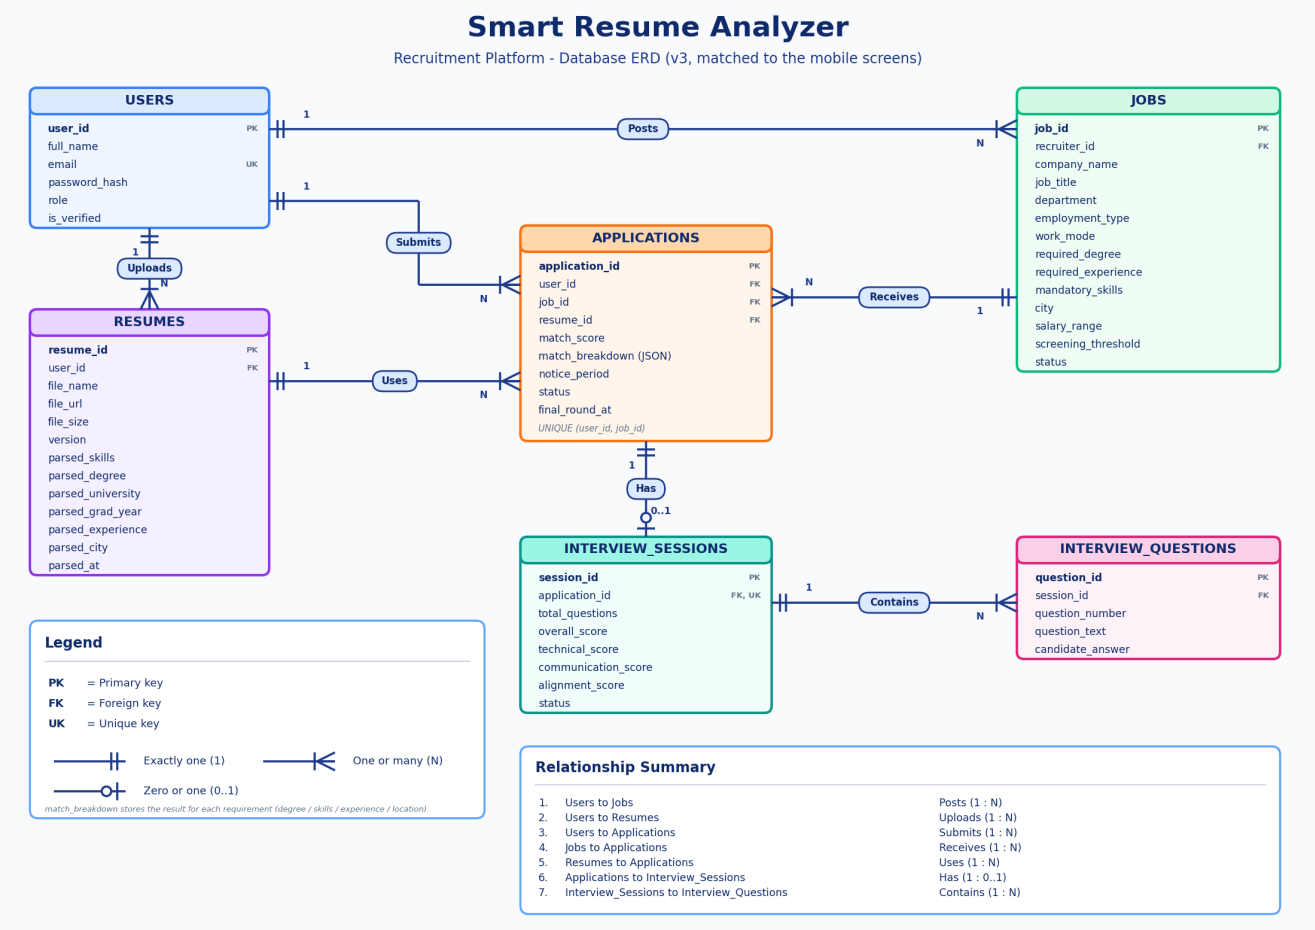

This app lets job seekers upload a resume, get an AI match score, and take an AI interview, while recruiters post jobs and review candidates.

The story in 6 steps

1	A person creates an account	**USERS**
2	A recruiter posts a job	**JOBS**
3	A job seeker uploads a resume and AI reads it	**RESUMES**
4	The job seeker applies and gets a match score	**APPLICATIONS**
5	An AI interview is created for that application	**INTERVIEW_SESSIONS**
6	The interview asks questions and records the answers	**INTERVIEW_QUESTIONS**

This version keeps only what the 8 mobile screens actually need.

The diagram

How to read it

Box	One table (a list of one kind of thing, like users).
PK (Primary Key)	A unique ID for each row, like a roll number.
FK (Foreign Key)	An ID that points to a row in another table.
UK (Unique Key)	No two rows can have the same value.
Line with 1 and N	1 = exactly one, N = one or many.
Circle on a line (0..1)	The link is optional, so it can be zero.

The tables, field by field

USERS

Everyone who uses the app, both job seekers and recruiters.

user_id	Unique ID of the user.
full_name	The user's name.
email	Login email. Must be unique.
password_hash	Password saved in a scrambled, safe form.
role	Job seeker or recruiter/HR.
is_verified	Whether the email is confirmed.

JOBS

Job posts created by recruiters.

job_id	Unique ID of the job.
recruiter_id	The recruiter who posted it (links to USERS).
company_name	Company hiring.
job_title	Name of the position.
department	Team the job belongs to.
employment_type	Full-time, part-time, internship, etc.
work_mode	Onsite, remote or hybrid.
required_degree	Degree the job needs.
required_experience	Years of experience needed.
mandatory_skills	Skills the candidate must have.
city	Job location.
salary_range	Pay offered.
screening_threshold	Minimum match score needed to pass screening.
status	Accepting resumes or closed.

RESUMES

Resume files uploaded by job seekers, plus what the AI read from them.

resume_id	Unique ID of the resume.
user_id	Who uploaded it (links to USERS).
file_name	Name of the file.
file_url	Where the file is stored.
file_size	Size of the file.
version	Which upload this is (v1, v2...).
parsed_skills	Skills the AI found.
parsed_degree	Degree the AI found.
parsed_university	University the AI found.
parsed_grad_year	Graduation year the AI found.
parsed_experience	Experience the AI found.
parsed_city	City the AI found.
parsed_at	When the AI read the resume.

APPLICATIONS

One job seeker applying to one job with one resume. This is the center of the app.

application_id	Unique ID of the application.
user_id	Who applied (links to USERS).
job_id	Which job (links to JOBS).
resume_id	Which resume was used (links to RESUMES).
match_score	How well the resume fits the job, as a score.
match_breakdown (JSON)	Result for each requirement: degree, skills, experience, location.
notice_period	How soon the candidate can join.
status	Applied, shortlisted, rejected, etc.
final_round_at	Date of the final round.
UNIQUE (user_id, job_id)	A user can apply to the same job only once.

INTERVIEW_SESSIONS

The AI interview taken for an application, with its scores.

session_id	Unique ID of the interview.
application_id	Which application it belongs to. Unique, so one interview per application.
total_questions	How many questions were asked.
overall_score	Final interview score.
technical_score	Score for technical answers.
communication_score	Score for how well they communicated.
alignment_score	How well the answers match the job.
status	Not started, in progress or completed.

INTERVIEW_QUESTIONS

Each question asked in an interview, with the candidate's answer.

question_id	Unique ID of the question.
session_id	Which interview it was asked in.
question_number	Order of the question (1st, 2nd...).
question_text	The question itself.
candidate_answer	What the candidate answered.

How the tables connect

#	Tables	Link	Type	In simple words
1	**Users - Jobs**	Posts	1 : N	One recruiter can post many jobs.
2	**Users - Resumes**	Uploads	1 : N	One user can upload many resumes.
3	**Users - Applications**	Submits	1 : N	One user can apply to many jobs.
4	**Jobs - Applications**	Receives	1 : N	One job can receive many applications.
5	**Resumes - Applications**	Uses	1 : N	One resume can be used in many applications.
6	**Applications - Interview Sessions**	Has	1 : 0..1	An application has at most one interview, or none yet.
7	**Interview Sessions - Interview Questions**	Contains	1 : N	One interview has many questions.
